# Semester - 4

and the standard states in a

Course Code: 401

### Course Title: Organizational Soft-skills in Software Industry

Course Code	401
Course Title	Organizational Soft-skills in Software Industry
	Ability Enhancement Course - 04
	[In option to this course, the course will be selected by the student and required 2 credits can be opted
	from the list of courses mentioned in Table-6 ( Page number 51 - 52 ) from NEP-2020 S.O.P. of Gujarat State
	implementation handbook for NcrFr. The credits can be acquired through any valid MOOC, online courses
	recognized and approved by UGC or from courses offered by college/institute out of the course basket offered
	by the University under the Ability Enhancement courses]
Credits	2
Course Category	Ability Enhancement Course (AEC-04)
Level of Course	200-299 (Intermediate Level)
Teaching per Week	2 Hours
Minimum weeks per	15 (Including class work, examination, preparation etc.)
Semester	
<b>Review / Revision</b>	-
Implementation Year:	A.Y. 2024-2025
Purpose of Course	Computer Science professionals work at different levels in the hierarchy of
	various jobs in IT. It is essential to understand the Organization Structure and
	behavior.
	<ul> <li>Integration of Knowledge and Skills: One objective of a multidisciplinary course is to foster the integration of knowledge and skills from different disciplines. By combining various areas of study, students can gain a holistic understanding of a particular topic or problem. This objective aims to break down the traditional boundaries between subjects and encourage students to see connections and relationships across different fields.</li> <li>Promoting Critical Thinking and Problem Solving: Another objective is to enhance students' critical thinking and problem-solving abilities Multidisciplinary courses often involve complex real-world issues that require a multifaceted approach. By engaging with diverse perspectives and methodologies, students develop the capacity to analyze problems from multiple angles, think creatively, and propose innovative solutions.</li> <li>Enhancing Collaboration are essential skills in today's interconnected world Multidisciplinary courses aim to cultivate these skills by providing opportunities for students to work collaboratively with peers from different disciplines. Through group projects, discussions, and presentations, students learn how to articulate their ideas, listen actively to others, and collaborate effectively to achieve common goals. This objective prepares students for interdisciplinary work environments and encourages the exchange of ideas across disciplinary boundaries.</li> </ul>
	These courses are designed as combination of Indian Languages (from the Eighth Schedule of the Indian Constitution) and English language courses, with a specific focus on enhancing language and communication skills. The primary objective of these courses is to help students acquire and demonstrate essential soft-skills in discipline specific(software industry), linguistics skills, including

Teaching Methodology	Class Work, Discussion, Self-Study, Case-study, Seminars and/or Assignments
Evaluation Method	<ul> <li>50% Internal assessment.</li> <li>50% External assessment.</li> <li>External Assessment: Each student will be given a case-study of software industry to study organizational structure, hierarchy of the employee structure, environment and interpersonal communication among the teams. Tools and techniques used to interact within the organization and with the clients. The students will create a report/document based on the given case study and give presentation at the end of the semester for final evaluation. The examiner panel will consist of two examiners including one faculty member/resource person who handled the course and one person from the software industry. (Incase the person from software industry is not available, both examiners can be faculty members/resource person of the institute.)</li> <li>Assessment :</li> <li>Writing skills and report/documentation abilities (20%)</li> <li>Oral presentations evaluating verbal communication skills (20%)</li> <li>Viva-voce (20%)</li> <li>Case study analysis and problem-solving exercises focusing on communication strategies in software organizations (40%)</li> </ul>

with the second states.

### Course Code : 402-01 Course Title: IoT (Internet of Things)

402-01
Internet of Things (IoT)
4
Minor Course
200-299 (Intermediate Level)
4 Hrs
15 (Including Class work, examination, preparation etc.)
A.Y. 2023-2024
A.Y. 2024-2025
English
The purpose of the "Introduction to IoT" course is to provide students with a foundational understanding of the Internet of Things (IoT) ecosystem. Through this course, students will gain insight into the concepts, technologies, and applications that underpin IoT networks and devices. They will explore the interconnected nature of IoT systems, learn about sensors, actuators, and connectivity protocols, and understand how data is collected, transmitted, and analyzed in IoT environments. Ultimately, the course aims to equip students with the knowledge and skills to comprehend the potential of IoT in various industries, and to critically evaluate IoT solutions for addressing real- world challenges.
To understand the concepts and protocols related to Internet of Things. To get an idea where the application areas are available for the Internet of Things to be applied.
Basic Knowledge of Networking
<ul> <li>CO1: Understand the Concept of IoT: Students will be able to define the Internet of Things (IoT) and explain its significance in connecting physical devices, sensors, and actuators to the internet to enable data exchange and automation.</li> <li>CO2: Identify IoT Components and Technologies: Students will be able to identify and describe the key components of IoT systems, including sensors, actuators, microcontrollers, communication protocols, and cloud platforms.</li> <li>CO3: Explain IoT Communication Protocols: Students will be able to explain various communication protocols used in IoT networks, such as Wi-Fi, Bluetooth, Zigbee, and MQTT, and understand their strengths, weaknesses, and applications.</li> <li>CO4: Analyze IoT Applications and Use Cases: Students will be able to analyze real-world IoT applications and use cases across different industrial automation.</li> <li>CO5: Design and Implement Simple IoT Solutions: Students will be able to design and implement simple IoT solutions using hardware components, microcontrollers, sensors, actuators, and basic programming languages.</li> <li>CO6: Evaluate IoT Security and Privacy Considerations: Students will</li> </ul>

Teaching Methodology	Class Work, Discussion, Self-Study, Seminars and/or Assignments
Evaluation Method	50% Internal assessment.
	50% External assessment.

#### Course Code: 402-02 Course Title: User Interface and User Experience Design (UI/UX Design)

and the second states of the second

Course Code	402-02
Course Title	User Interface and User Experience Design (UI/UX Design)
Credits	4
Course Category	Minor Course
Level of Course	200-299 (Intermediate Level)
Teaching per Week	4 Hrs
Minimum weeks per Semester	15 (Including class work, examination, preparation etc.)
Review / Revision	
Implementation Year:	A.Y. 2024-2025
Purpose of Course	This course introduces UI/UX design principles, methodologies, and practica skills, preparing students for further exploration and specialization in the field. The purpose of a UI/UX course is to equip students with the knowledge, skills, and techniques necessary to design user interfaces and experiences that are intuitive engaging, and effective. Through a combination of theoretical understanding and practical application, students learn to create user-centric designs that enhance usability, accessibility, and user satisfaction. The course covers topics such as used research, information architecture, interaction design, visual design, and usabilit testing, providing a comprehensive foundation in the principles and best practice of UI/UX design. By mastering these skills, students are prepared to pursue career in various industries, contributing to the creation of seamless and enjoyable digita experiences for users.
Course Objective	<ul> <li>i) Understand the Basics of UI/UX Design: Introduction to the fundamental principles and concepts of user interface (UI) and user experience (UX) design, including the difference between UI and UX, the importance of user-centered design, and the role of UI/UX in product development.</li> <li>ii) Learn User Research Methods: Familiarize with basic user research methods, such as user interviews, surveys, and observation techniques, to understand user needs, behaviors, and preferences.</li> <li>iii) Create Wireframes and Prototypes: Learn how to create low-fidelity wireframes and prototypes using simple design tools or pen and paper to visualize the structure and layout of digital interfaces.</li> <li>iv) Explore Interaction Design Principles: Introduction to interaction design principles, including affordances, feedback, and user flows, to design intuitive and responsive user interfaces that facilitate user interaction and navigation.</li> <li>v) Conduct Usability Testing: An overview of usability testing methods and techniques, such as heuristic evaluations and user testing sessions, to evaluate the effectiveness and usability of UI designs and gather feedback for iteration and improvement.</li> </ul>
Pre-requisite	
Course Outcomes	<b>CO1:</b> Provide students with a foundational understanding of user interface (UI) and user experience (UX) design principles, including usability, accessibility, and user-centered design.

	CO2: Fa	amiliariz	e student	s with ba	sic user 1	esearch 1	nethodol	ogies, su	ch as user	
	interviews, surveys, and personas, to identify user needs, behaviors, and									
	preferences.									
	<b>CO3:</b> Develop students' ability to create low-fidelity wireframes and prototypes									
	using industry-standard tools or pen and paper, enabling them to visualize and communicate design concepts effectively.									
						an princi	nles incl	uding of	fordances,	
	feedback, and user flows, to design intuitive and responsive digital interfaces that facilitate user interaction and engagement.

### Course Code: 403 Course Title: Java Programming Language

Course Code	403								
Course Title	Java Programming Language								
Credits	4								
Course Category	Major Course								
Level of Course	300-399 ( Higher Level )								
Teaching per Week	4 Hrs. ( 3 Hours Theory + 2 Hours Practical work )								
Minimum weeks per	15 (Including class work, examination, preparation etc.)								
Semester	an a								
Review / Revision	2023-2024								
Implementation Year:	A.Y. 2024-2025								
Purpose of Course	To teach Object Oriented Programming (OOP) concepts through								
	Coding using Java as programming language.								
Course Objective	1. To make students understand the syntax and Object Oriented Programming								
	(OOP) concepts using Java.								
	2. To make students understand various inbuilt Java classes and their								
	working.								
	3. To make students understand the importance of OOP methodology.								
n • •	4. To make students understand various types of OOP techniques.								
Pre-requisite	Prior Knowledge object oriented concepts.								
Course Outcomes	<b>CO1:</b> Understand the core principles of object-oriented programming (OOP)								
	and apply them proficiently in Java, including classes, objects, inheritance,								
	polymorphism, and encapsulation.								
	<b>CO2:</b> Develop the ability to design, implement, and test Java applications,								
	employing OOP concepts to create modular, reusable, and maintainable code.								
	<b>CO3:</b> Demonstrate competence in utilizing Java's built-in libraries and								
	frameworks to solve real-world problems efficiently, leveraging object-								
	oriented design patterns where applicable.								
	<b>CO4:</b> Analyze and debug Java programs effectively, employing best practices in error handling, exception handling, and debugging techniques to ensure								
	robustness and reliability.								
	<b>CO5:</b> Collaborate with peers in team-based Java projects, effectively communicating ideas, contributing to code reviews, and integrating individual								
	contributions into cohesive software solutions.								
Mapping between	PSO1 PSO2 PSO3 PSO4 PSO5 PSO6 PSO7 PSO8								
Course	CO1								
Outcomes(CO) with	CO3								
Program Specific	CO4								
Outcomes(PSO)	C05								
Course Content	Unit 1. Introduction to Java								
course content	1.1 Properties of Java								
	1.2 Comparison of java with C++								
	1.3 Java Compiler, Java Interpreter								
	1.4 Identifier, Literals, Operators, Variables, Keywords, Data Types								
	1.5 Branching: If – Else, Switch								
	1.6 Looping: While, Do-while, For								

	1.7 Type Casting
	Unit 2. Classes and Objects
	2.1 Simple Class, Field
	2.2 Access Controls, Object creation
	2.3 Construction and Initialization
	2.4 Inheritance and Polymorphism in Java
	2.4.1 Data encapsulation, overriding and overloading methods
	2.5 this and super keywords
	2.6 Static members, static block, static class
	2.7 Interfaces:
	2.7.1 Introduction to Interfaces, Interface Declaration.
	2.7.2 Inheriting and Hiding Concepts.
	2.7.3 Inheriting, Overloading and Overriding Methods and
	constructors.
	2.7.4 Interfaces Implementations.
	Unit 2 Pasis Concents of Strings and Excentions :
	Unit 3. Basic Concepts of Strings and Exceptions : 3.1 Strings
	3.1.1 Basic String operations, String Comparsion
	3.1.2 String methods (charAt(), concat(), equals(), indexOf(),
	isEmpty(), join(), lastIndexOf(), length(), split(),
	substring(),trim())
	3.1.3 StringBuffer class and its constructors.
	3.1.4 StringBuffer methods : (append(),insert(),update(), delete(),
	reverse(),capacity())
	3.2 Introduction to Exceptions:
	3.2.1 Exception Types, User defined Exception
	3.2.2 Throw, Throws
	3.2.3 Try, Catch and Finally
	Unit 4. Threads and Packages:
	4.1 Thread
	4.1.1 Introduction to Threads, Thread Model
	4.1.2 Priority of Threads
	4.2 Package Naming, Type Imports
	4.2.1 Package Access, Package Contents
	4.2.2 Package Object and Specification
	Unit 5. Data Structure Implementation using Java Class
	5.1 Implementation of Data Structure using Java Class:
	5.1.1 Concepts of singly and singly circular link-list
	5.1.2 Singly Link List : Create, traverse, insert, delete node
	5.1.3 Singly circular link list: create, traverse, insert, delete node.

## Course Code: 404 Course Title: .NET Programming

Course Code	404
Course Title	.NET Programming
Credits	4
Course Category	Major Course
Level of Course	300-399 ( Higher Level )
Teaching per Week	4 Hrs. ( 2 Hours Theory + 4 Hours Practical work )
Minimum weeks per Semester	15 (Including class work, examination, preparation etc.)
Review / Revision	2023-2024
Implementation Year:	A.Y. 2024-2025
Purpose of Course	This syllabus has been prepared for the beginners to help them understand basic .Net programming. After completing this, students will get a moderate level of expertise in .Net programming from where, they can take themselves to next levels.
Course Objective	<ul> <li>To make students understand .Net as simple, modern, object- oriented computer programming language developed by Microsoftto combine the power of .NET Framework and the CLR with the productivity benefits.</li> <li>To make students understand basic .Net programming and will also take through various advanced concepts related to .Net programming language.</li> </ul>
Pre-requisite	Students are expected have concepts related to Programming techniques using Object Oriented.
Course Outcomes	<ul> <li>CO1: Understand the fundamentals of .NET framework: Students will gain a solid understanding of the .NET framework, including its architecture, components, and how it supports various programming languages such as C# and Visual Basic.NET.</li> <li>CO2: Develop basic programming skills in C#: Students will learn the syntax, data types, control structures, and object-oriented programming concepts in C#, one of the primary languages used in .NET development.</li> <li>CO3: Create and manipulate .NET applications: Students will be able to create, compile, debug, and run basic .NET applications using Visual Studio IDE, including console applications, Windows Forms applications, and simple web applications.</li> <li>CO4: Utilize .NET framework libraries and APIs: Students will learn to leverage the vast array of libraries and APIs provided by the .NET framework for tasks such as file I/O, database access, error handling, and networking.</li> <li>CO5: Gain familiarity with modern software development practices: Students will be introduced to essential software development practices, including version control with Git, debugging techniques, unit testing, and documentation, to build robust and maintainable .NET applications.</li> </ul>

# Course: 405-01: Web Designing-2

APRIL CONTRACTOR

Course Code	405-01					
Course Title	Web Designing-2					
Credit	4					
Course Category:	Major Course					
Level of Course:	300- 399 ( Higher Course )					
Teaching per Week	4 Hrs ( 2 Hours Theory + 4 Hours of Lab. Work)					
Minimum weeks per Semester	15 (Including class work, examination, preparation etc.)					
Review / Revision	2023-2024					
Implementation Year:	2024-2025					
Purpose of Course	Web Design requires designers to create graphics, typography as well as images which are used only on the World Wide Web. While creating any design, well designers need to maintain balance between creating a good design as well as the speed and efficiency for the webpage/ website. This course deals with server-side communication.					
Course Objective	To make students aware of web terminology and website designing tools. Studen can understand and implement the real functions of website development.					
Pre-requisite	Knowledge of HTML5, Bootstrap, JavaScript					
Course outcome	<ul> <li>CO1: Students will be able to create, organize and design websites.</li> <li>CO2: Students gain formal understanding of XML-based technologies which used in Web-service.</li> <li>CO3: Students will be able to make dynamic changes to a web pages as well respond to user and browser events through JQuery</li> <li>CO4: Students will be able to learn cross-browser supports via Ajax and Jason</li> <li>CO5: Students will be able to write asynchronous code using various technique through Node.js</li> </ul>					
Mapping between	PSO1 PSO2 PSO3 PSO4 PSO5 PSO6 PSO7 PSO8					
Course	COI					
Outcome(CO) and	CO2					
Program Specific	CO3					
Outcome (PSO):	CO4					
	CO5					
Course Content	<ul> <li>Unit-1 : Introduction of XML:</li> <li>1.1 Characteristic and Use of XML</li> <li>1.2 XML syntax (Declaration, Tags, elements)</li> <li>1.3 root element, case sensitivity</li> <li>1.4 XML document: <ul> <li>1.4.1 Document Prolog Section</li> <li>1.4.2 Document element section</li> </ul> </li> <li>1.5 XML declaration and rules of declaration.</li> </ul> <li>Unit-2: jQuery Fundamentals: <ul> <li>2.1 Introduction and basics:</li> </ul></li>					

	2.2 jQuery Effects:
	2.2.1 Show/Hide, Fade, Slide, Stop, Chaining, Callback
	<ul> <li>2.3 jQuery Manipulation methods:</li> <li>2.1.1 Get/Set methods (text(), attr(), html(), val())</li> <li>2.1.2 Insert methods: (append(), prepend(),text(), before(), after(), wrap())</li> <li>2.1.3 Remove element methods : (remove(),empty(),unwrap())</li> <li>2.3.4 Query Get and Set CSS properties using css() method.</li> </ul>
	<ul> <li>Unit-3: JSON: (JavaScript Object Notation)</li> <li>3.1 Concept and Features of JSON</li> <li>3.2 Similarities and difference among JSON and XML</li> <li>3.3 JSON objects(with string and Numbers))</li> <li>3.4 JSON Arrays and their examples :</li> <li>3.4.1 Array of string, Array of Numbers, Array of Booleans</li> <li>3.4.2 Array of objects, Multi-Dimensional Arrays</li> <li>3.4.3 JSON comments</li> </ul>
	Unit-4: AJAX (Asynchronous JavaScript and XML):
	<ul> <li>4.1 Fundamentals of AJAX technology:</li> <li>4.1.1 Difference between Synchronous and Asynchronous web application</li> <li>4.1.2 XMLHttpRequest technology</li> </ul>
	<ul><li>4.2 XMLHttpRequest</li><li>4.2.1 Properties :( onReadyStateChange, readyState, responseText, responseXML)</li></ul>
	4.2.2 XMLHttpRequest Methods : (Open(), send(), setRequestHeader()) 4.3 Working of AJAX and its architecture
	Unit-5: Node.js : 5.1 Concepts, working and Features 5.1.1 Downloading Node.js 5.2 Setting up Node.js server(HTTP server) 5.2.1 Installing on window 5.2.2 Components 5.2.2.1 Required modules, Create Server(http.createServer())
	5.2.2.2 Request and response 5.3 Built-in Modules 5.3.1 require() function - 5.3.2 User defined module: create and include
	5.3.3 HTTP module
	5.4 Node.js as Web-server: 5.4.1 createServer(), writeHead() method
	5.4.2 Reading Query String, Split Query String 5.5 File System Module:
	5.5.1 Read Files (readFile()) 5.5.2 Create Files(appendFile(),open(),writeFile())
	5.5.3 Update Files(appendFile(),writeFile())
	5.5.4 Delete Files(unlink()) 5.5.5 Rename Files(rename())

### Course: 405-02: Mobile Application Development - 2

Course Code	405-02								
Course Title	Mobile Application Development – 2								
Credit	4								
Course	Major Course								
Level of Course	300 – 399 ( Higher Course )								
Teaching per Week	4 Hrs								
Minimum weeks per	15 (Includ	15 (Including class work, examination, preparation etc.)							
Semester		0							
Review / Revision	2023-2024								
Implementation From	2024-2025	A.Y.							
Purpose of Course	Mobile application development is the process of creating software applications that run on a mobile device, and a typical mobile application utilizes a network connection to work with remote computing resources. Mobile device is used for different purposes ranging from email to online shopping and multiple apps for different reasons. Hence, the mobile development process involves creating installable software bundles, implementing backend services such as data access with an API, and testing the application on target devices. Knowledge about mobile application development on Android platform and gradually on hybrid platform is need of the current era.								
Course Objective	<ol> <li>To understand concepts of Mobile Technology</li> <li>Understand the development process and have edge over mobile user interface (UI) design.</li> <li>Understand various UI development tools, Application design interfaces and creating basic app on Android platform.</li> <li>Concepts of DART and introduction of FLUTTER.</li> </ol>								
Pre-requisite	Basics of Mobile Application Development and designing concepts.								
Course outcome	<ul> <li>CO1: Students will be able to understand the internal concepts of Android.</li> <li>CO2: Students will have concepts of important Android Widgets(UI)</li> <li>CO3: To learn concepts of DART.</li> <li>CO4: To work on Flutter.</li> <li>CO5: To gain edge over Basic Flutter Widgets.</li> </ul>

	Unit-2: Working with DART:					
	2.1 DART overview, concept, features and installation					
	2.2 Online editor DartPad and dart2js tool					
	2.3 Executing Dart basic code using Command line, DartPad and IDE					
	2.4 Understanding DART syntax:					
	2.4.1 Identifiers, Datatypes, variables, comments					
	2.4.2 Decision making (if, if.else, if.else if, switch.case)					
	2.4.3 Iterative statements (for, forin loop, while, dowhile)					
	2.4.4 break, continue, label					
	2.5 DART function :					
	2.5.1 Calling function, deleting function					
	2.5.2 Passing arguments to function, lexical scoping.					
	Unit-3: Introduction of Flutter:					
	3.1 Fundamentals of Flutter:					
	3.1.1 Installation and Architecture of Flutter					
	3.1.2 Features of Flutter					
	3.1.3 Creating basic flutter project using Android Studio					
	3.2 Flutter Widget:					
	3.2.1 Types of flutter widget:					
	3.2.1.1 Visible and Invisible					
	3.2.1.2 StatelessWidget, StatefulWidget					
	3.2.1.3 Single child widget and Multiple child widget					
	5.2.1.5 Shigle enna widget and Waltiple enna widget					
	UNIT-4: Flutter basic widgets:					
	4.1 Visible widget(Constructor and Properties):					
	Text, Image, Button, Icon					
	4.2 Invisible widget(Constructor and Properties):					
	column, row, center, padding, scaffold, stack					
	4.3Text, TextField					
	4.4 Buttons, Slider					
	4.5 Checkbox, RadioButton					
	Unit-5: Flutter widget ( Constructor, attributes and Properties)					
	5.1 Progress Bar, Stack					
	5.2 Lists					
	5.3 Alert Dialogbox , Tooltip					
	5.4 Toast, Switch					
	5.5 Charts, Flutter Form.

#### Course code: 407 Course Title: Value Addition Course-IV (VAC-04)

Teaching Methodology	Class Work/ Discussion/ Self-Study/ Seminars/ field works/ practical training/ field work and/or Assignments.
Evaluation Method	50% Internal assessment. 50% External assessment. Maximum Marks: 50 (Evaluation and Assessment will be carried out based on the nature of the course. On successful completion of the course, the student will be granted 2 credits.)

**Internship:** Student willing to exit the program at the end of the two semesters and to avail the Certificate in Computer Application or exit the program at the end of the first four semesters and to avail the Diploma in Computer Application, it is essential to acquire four credits from internship. A key aspect of the internship is induction into actual work situations. Internships involve working with local industry, government or private organizations, business organizations, artists, crafts persons, and similar entities to provide opportunities for students to actively engage in on-site experiential learning. In option to these internships, the student can avail such four credits by availing two 2-credit university approved courses during any of these semesters. The student is required to enroll and avail these 4-credits and produce the evidence in process to opt the multi-level exit option after successfully completion of first year ( two semester ) or second year(four semesters).
